Go to Spotlight, search Dashcode, and select the RSS template.

The Dashcode Developer Environment

This area is the Toolbar

This area is the Canvas

This area is the Navigator

This section is the bottom edge of the project window
These are the workflow steps for creating an RSS app:

1. **Provide feed**

2. **Set attributes**
   - Give the webpage a title.
   - Specify orientation and web clip attributes.

3. **Design Icon**
   - This is the icon that appears when your web app is bookmarked on the iPhone’s home screen.

4. **Generate files**
   - Save the HTML, CSS, and JavaScript components of your app; upload to NetFiles or another web hosting service.
